

MONETRA[®]

Payment Switch Software

Enterprise
Host Switch

- Protects sensitive data with comprehensive PA-DSS and PCI compliance
- Reliable, non-stop transaction processing and sophisticated, automatic communications fail-over
- Scalable and cluster-ready to meet any application requirement from one user to thousands
- Concurrently processes all types of transactions for multiple processors and unlimited client devices
- High-speed transaction processing capable of thousands of transactions per minute
- Connects into any IT environment via open API and Enterprise-class SQL support
- Keeps your applications independent with support for all major transaction processors

Whether you have one location or thousands, Monetra[®] can provide centralized switching for all of your enterprise transaction processing needs. Monetra's high-performance, multithreaded architecture means just one Monetra server can process thousands of transactions per minute, for thousands of different Merchant ID's and any number of locations and terminals. Super-scalable design lets you create clustered and even geographically distributed Monetra installations for high-availability, non-stop processing.

MONETRA[®] Payment Switch Software

Monetra[®] provides a rich set of features and capabilities to support every application:

- Built-in data encryption and multi-user password support
- Supports secure SSL communications for incoming and outgoing connections
- Connects via dial-up modem, high-speed Internet and Frame Relay/Leased Lines
- Concurrently supports unlimited merchant accounts through multiple processing institutions
- Protects sensitive data with comprehensive PA-DSS and PCI compliance. API's available in C/C++, C#, VB.Net, Java, Perl, PHP and Delphi

Hardware Requirements:

Monetra[®] supports 32-bit and 64-bit Intel, 64-bit Sparc, and 64-bit PPC CPU architectures, with minimal requirements for memory and disk space. Monetra runs easily on virtually any typical computer system, even when the computer is also running other applications such as point-of-sale software. Additional memory and a separate database server are recommended for extremely high-performance applications.
